WHAT IS NUKI?

Nuki is the first Bluetooth Smart Lock for Europe with permanent internet access. By using Bluetooth Nuki automatically opens your door when authorized persons come home and locks it again when they leave the house. Your smartphone stays in your pocket.

The additional installation of the Nuki Bridge (optional) gives your Smart Lock internet access. So you can control your Smart Lock on the go and, for example, open the door for craftsmen when you're away from home.

If you do not have your smartphone at hand, you can still open your door with your physical key, as long as the existing cylinder has an so-called emergency function (also named as "external key override function" or "priority function"). This function allows you in case of emergency to open the door with your physical key when a Nuki Smart Lock is mounted on the inside of the door.

THE NUKI APP

The Nuki App is the centerpiece of the smart lock. With the App you can manage the settings, grant access permissions, view the activity log as well as open and close your lock.

HIGHLIGHTS:

COMFORT EVERYDAY - Open and close your front door with a simple swipe on your smartphone (iOS & Android) or smartwatch.

SAFELY LOCKED - With the aid of the new door sensor, the Smart Lock not only shows the status of the lock cylinder, but also whether the door is open or closed.

AUTO UNLOCK - The Nuki Smart Lock automatically opens the door when you come home. Your smartphone stays in your pocket!

LOCK'N'GO - With Nuki your door automatically locks the door behind you as you leave the house. You never have to wonder if your door is properly locked when you are on your way.

ACCESS PERMISSIONS - Create and manage access permissions for your family, friends, craftsmen or babysitters - determine when they may lock your door and whether this permission should be on a permanent, recurring or one-time basis.

SMARTWATCH INTEGRATION - Easily open and lock your electronic door lock from your wrist. The Smart Lock is easy to unlock and lock by swiping through your watch. The Nuki app is also available for the Apple Watch and Android smartwatches.

SMART HOME INTEGRATION - Connect your Nuki Smart Lock with all popular smart home services, like Apple HomeKit, Amazon Alexa or Google Home, to make your life even easier.

PRODUCTS

NUKI SMART LOCK

The Nuki Smart Lock turns your smartphone into a smart key. It opens your door when you come home and locks it when you leave. The new door sensor allows the Nuki Smart Lock to show not only the status of the lock cylinder, but also whether the door is open or closed, and warns you if you want to lock your door when it is still open.

Functions: Auto Unlock, Auto Lock, 200 Berechtigungen, Apple Homekit, Türsensor, Knauf- und Ovalzylinder, Bluetooth 5

NUKI BRIDGE

Nuki Bridge brings your Nuki Smart Lock online, so you can manage and control it remotely with the Nuki App anytime and anywhere.

NUKI FOB

With the small Bluetooth keyfob, you can lock or unlock your door at any time without a smartphone.

NUKI KEYPAD

The Keypad is the perfect add-on to your Nuki Smart Lock. No need to take anything with you: simply enter your 6-digit access code to give you and your guests easy access to your home – no need for accessories!

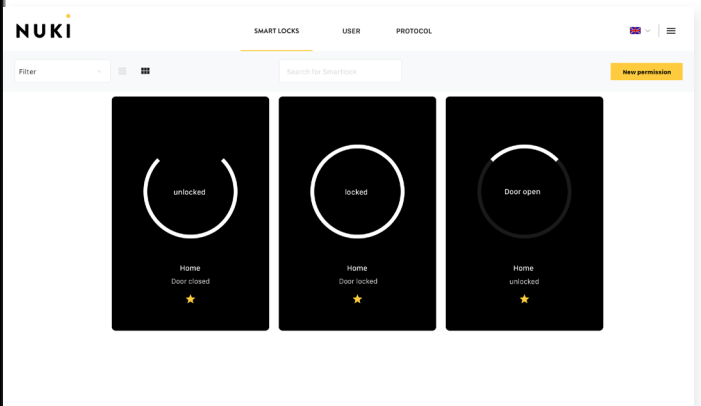

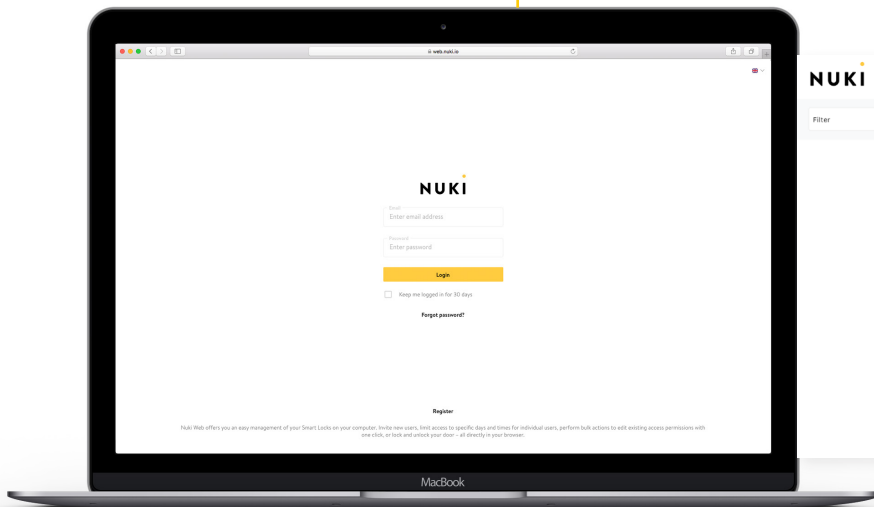

NUKI COMBO

With the Nuki Combo (consisting of Smart Lock and Bridge) customers save € 30.

REMOTE ACCESS

Thanks to the Nuki App (available for iOS and Android for free) or Nuki Web, you can manage and control up to 100 Smarts Locks.

The Nuki Web platform also allows you to conveniently access all the features of your Smart Locks from your computer.

SECURITY:

SECURE END-TO-END ENCRYPTION - each Nuki App uses its own key to communicate with the Nuki, which is only known to the Nuki and its App. Nobody else knows this key. To ensure that the data transmitted via Bluetooth is always secure from attackers, the data is already encrypted by the sender (for example, the app) before transmission. Only the already encrypted data is transmitted via Bluetooth and decrypted at the receiver (for example, the Nuki) again. This end-to-end encryption is comparable to that of online banking.

INVISIBLE ON THE INSIDE OF THE DOOR - The Nuki Smart Lock is mounted on the inside of your existing door lock and therefore can not be seen from outside.

CONFIRMED BY EXPERTS - property insurance has confirmed that the use of Nuki does not affect the level of security of a door. The communication of the Smart Lock is encrypted end-to-end. Our security standards are comparable to those in the online banking sector. We were also tested and honored by independent security experts and institutes.

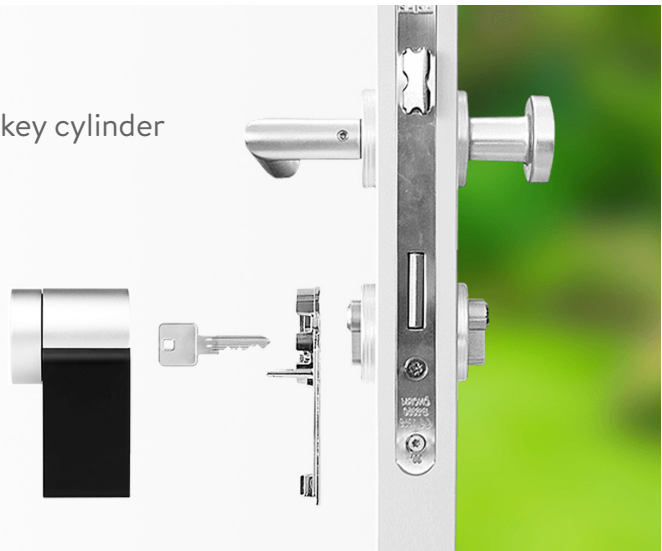

REVOKE KEY - Should the phone ever get lost, you can easily remove access authorization (of course also on the way).

ULTRA STRONG ENCRYPTION - Clever End-to-End Encryption ensures the highest possible security standard. Nuki uses Bluetooth Low Energy to communicate with the Nuki App. To achieve a high standard of security, we have set up our own encryption protocol for normal Bluetooth communication.

INSTALLATION

The Nuki Smart Lock is installed on the inside of your door using your existing lock cylinder and key. Depending on the projection of your cylinder, you simply choose one of the supplied mounting plates. The Nuki Smart Lock is ready to start within 3 minutes and can easily be mounted by anyone. Without screws and drilling.

- 1 Install the mounting plate on the existing key cylinder
- 2 Insert existing key
- 3 Attach Smart Lock to the mounting plate
- 4 Done!!

To test in advance whether Nuki fits your door lock, find the link to the installation check on our website or the packaging.

Under the following link you will find the recommended installation check where you can easily determine which lock fits Nuki right away:
